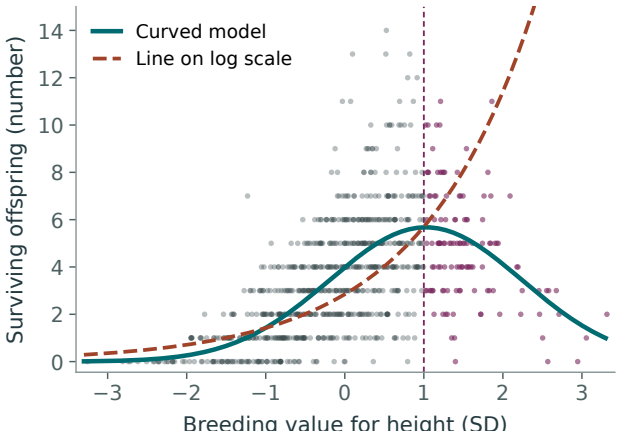
A Count offspring for each parent

Saved observations from the one-trait teaching example.



B Weight the same parents

High group: breeding value above +1 SD.

Weight	Group share	Mean (SD)
One per parent	**15.3%**	**0.00**
Counted offspring	**20.4%**	**+0.38**
Curved model	**21.3%**	**+0.41**
Line on log scale	**37.1%**	**+0.70**

122 of 800 parents belong to the high group.

They produced 585 of 2,862 recorded offspring.

Each dot is a parent. All 88 parents with zero offspring remain in the population and contribute zero to the count-weighted mean.
